

SSE Security Assessment Report

Zero Trust Network Access & DLP Verification

1. Executive Summary

This document serves as a professional testing artifact for validating Security Service Edge (SSE) capabilities. It is designed to test how internal security policies process, scan, and inspect PDF files traversing the network boundary.

Test Objective: Verify that the Deep Packet Inspection (DPI) engine and Data Loss Prevention (DLP) scanners correctly parse structured PDF metadata and internal text streams.

2. Simulated Security Policies

The following zero-trust routing policies are currently simulated within this test environment:

- Policy A:** Block all outbound unauthorized encrypted archives.
- Policy B:** Enforce deep scanning on all application-layer traffic (HTTP/S, DNS).
- Policy C:** Detect and flag restricted organizational keywords within transmitted documents.

3. Sample Data Table

Endpoint	Compliance Status	Last Checked
Workstation-01	Compliant	2026-05-21 09:00 UTC
Server-Proxy-A	Non-Compliant	2026-05-21 09:15 UTC
